zBoost[®] CSD 20K and 40K Kits Commercial Solutions Division

Buildings, office environments and commercial spaces rely on good cell phone signals for tenants and employees to remain productive. Wi-Ex has designed complete system solutions to provide improved indoor cell phone coverage for indoor spaces of up to 20,000 square feet. An expanded version increases indoor coverage for spaces up to 40,000 square feet. The kits include all of the components for a complete system solution whether for commercial environments or large residential applications and utilize the proven zBoost technology from Wi-Ex to improve cell phone voice and data signals.

Benefits include:

- Improves indoor cell phone voice and data signals for all major carriers (except Nextel)
- Utilizes distributed amplifier architecture for increased reliability and flexibility
- All system components included for easy installation
- Utilizes patented network protection technology
- System kits available for coverage areas up to 20,000 and 40,000 square feet
